

Mini Project Process – Himshikhar Track

Agentic AI

MINI-PROJECTS

1. Structured-output workflow:

Build a multi-step LLM pipeline that turns messy text into clean structured data (parse recipes or job postings into JSON). Constraint: the output must validate. Skills: prompting and structured workflows.

2. Mini-RAG over your docs: Build a question-answering bot over a small document set you choose (a textbook chapter, a policy doc), without using a framework that admits when it does not know. Skills: retrieval-augmented generation.

3. Single-tool agent: Build an agent that uses one external tool (calculator, search, a weather API) to complete a task it cannot do on its own. Skills: agents and tool use.

4. Agent with memory or guardrails: Add short-term memory or a guardrail (refuses off-topic or unsafe requests) to a basic agent, and show the before and after. Skills: memory and guardrails

Mini Project Process – Himshikhar Track

Dear Students,

The Mini Project is one of the mandatory components of your Himshikhar Track.

Important Dates

- **Project Rollout Date:** 5th June 2026
- **Team Formation & Topic Selection Deadline:** 6th June 2026, 08:00 PM
- **Project Submission Deadline:** 15th June 2026, 08:00 PM

Note: No extensions will be granted under any circumstances. Please treat the submission deadline as a hard deadline.

Step 1: Team Formation / Individual Participation

Students may choose to:

- Work **individually**, or
- Form a **team of up to 3 members** (maximum).

Team Guidelines

- Once a team is formed, **team members cannot be changed** under any circumstances.
- Only ****one member **** (leader) from the team should submit the team details in the form.
- While filling out the form, provide:
 - Team Name
 - Team Member Details
 - Selected Project Topic

Individual Participants

Students choosing to work individually only need to select their project topic in the form.

Form Link : <https://forms.gle/QEDSMiH6tJwoKUGJ9>

Project Submission

All individual participants and teams must submit **one Google Drive folder link** containing all the project deliverables.

The Google Drive folder must include:

- **Project Files Folder** (containing the Source Code, Dataset(s) Used, and any other supporting project files (if any))
- **Project Presentation (PDF) (1-2 pages)**
- **Project Demonstration Video (3 min max)**

Important: The Google Drive folder link must be set to "**Anyone with the link can view**". Please ensure that all files inside the folder are accessible before submission.

Submission will be collected through a Google Form, the link for which will be shared separately.

For team submissions, the **Team Leader** should submit the final project on behalf of the entire team.

Feedback

The project feedback will be shared after the submission of project

Doubt-Solving Sessions

Dedicated doubt-solving sessions will be scheduled to help students with project-related queries. Students are encouraged to attend these sessions and seek clarification whenever required.

We wish you all the best for your project and look forward to seeing your innovative solutions.

Regards,
Academic Team
